Education

Vellore Institute of Technology

B.Tech in Computer Science and Engineering (Data Science), CGPA: 9.05

Vellore, India

Aug 2023 – May 2027

Mayoor School

Higher Secondary and Secondary Education

Noida, India

May 2023

Relevant Coursework

Data Structures & Algorithms · Database Management Systems · Machine Learning · OOP · Software Engineering · Operating Systems

Technical Skills

Languages: Python, Java, C++, SQL

Frameworks & Libraries: FastAPI, PyTorch, Scikit-learn, Pandas, NumPy, React, Hugging Face Transformers, LightGBM

Databases: MySQL, PostgreSQL, Redis, ChromaDB

Cloud & Tools: AWS, Docker, Kubernetes, Kafka, Git

Data Analytics & AI: Retrieval-Augmented Generation (RAG), LLMs, Generative AI, Computer Vision, NLP, REST APIs

Core Concepts: Object-Oriented Programming, Database Design, System Design Fundamentals

Experience

Globe Teleservices Pte. Ltd.

Intern

Gurugram, Haryana, India

May 2026 – Jun 2026

- Developed a production-ready backend service using **FastAPI**, **JWT/OAuth**, **SQLAlchemy ORM**, and **MySQL**, improving API responsiveness through asynchronous caching techniques.
- Integrated **Google Gemini** and **Groq APIs** with Retrieval-Augmented Generation (RAG) pipelines to deliver context-aware AI responses.

Magic Wand Labs

Trainee Data Science

New Delhi, India

Jan 2026 – Mar 2026

- Built machine learning pipelines for data preprocessing, feature engineering, and predictive modeling using **Python** and **Scikit-learn**.
- Analyzed datasets and improved model performance through feature engineering and model optimization.

Projects

PathSense – Pedestrian Risk Intelligence | *LightGBM, Kafka, Redis, Kubernetes, WebSockets* | GitHub

- Designed an AI-powered pedestrian safety platform for visually impaired users by engineering **20+ predictive features** from GPS, live weather, OpenStreetMap road metadata, and cyclical time encoding.
- Engineered a distributed real-time inference pipeline using Kafka, Redis, and WebSockets, delivering **low-latency risk predictions** with scalable event processing.

Food Allergen Detection System | *Python, PyTorch, Vision Transformer (ViT), React* | GitHub

- Fine-tuned a Vision Transformer (ViT) on the Food-101 dataset (**101 classes**), achieving **over 90% classification accuracy** while detecting **8+ common allergens** using a structured allergen database.
- Developed an end-to-end ML pipeline using PyTorch and Hugging Face Transformers with a React frontend for real-time allergen prediction.

Marvin – AI-Powered Women Safety App | *Java, Android, TensorFlow Lite, Room, SQLite* | GitHub

- Developed an Android safety application with on-device voice-triggered SOS detection using **TensorFlow Lite** and Android **SpeechRecognizer**, enabling hands-free emergency activation.
- Implemented an intelligent contact-ranking algorithm supporting **up to 5 emergency contacts** based on user priority and geographic proximity, with automated SOS SMS, live location sharing, emergency calling, and **60-second audio recording** using Room, Google Play Services, and Foreground Services.

Certifications & Activities

- Core Member, ISTE (Indian Society for Technical Education)– Organized and coordinated 5+ technical workshops on IoT, embedded systems, and automation for 100+ participants.
- Open Source Contributor – GirlScript Summer of Code (GSSoC 2026); contributed through code reviews, bug fixes, and feature development.
- Specialized Program in AI & ML with Drone Technology – IIT Roorkee.
- IBM Watsonx Generative AI Certification – IBM Skills Network.
